Summary

Blockchain engineer working across EVM infrastructure, privacy tech (FHE, ZK), and custom chain deployments. Lead engineer on a production RWA exchange running its own chain; built PoA networks on Reth, shipped Solidity governance and audit-trail systems, and won six paid hackathons across FHE, ZK, and payments tracks.

Education

Lokmanya Tilak College of Engineering

Bachelor of Engineering in Computer Engineering – 8.6 GPA

Mumbai, India

May 2025

Technologies & Open Source

- **Blockchain & EVM:** Solidity, Foundry, Hardhat, Viem, Wagmi, Ethers.js, Avalanche Subnets, Reth, EVM internals
- **Privacy:** FHE (Zama FHEVM, Fhenix CoFHE, Inco Lightning), ZK (Aleo/Leo), sealed-bid auctions, confidential payments
- **Languages & Infra:** Rust, Go, TypeScript, Node.js, Next.js, AWS, Docker, Kubernetes, Cloudflare Workers
- **Open Source:** 145 merged PRs – DefiLlama TVL, vault & fee adapters, Foundry book (`vm.parseJsonKeys` docs), Starknet Quest Rust API perf optimization, Witnet `elliptic-curve-solidity`

Experience

Qoneqt (Human Quotient Pvt Ltd)

Blockchain Engineer

Remote

April 2025 – Present

- Lead engineer on **Maha Fraxn**, the company's RWA exchange: 700+ commits (90%+ of the codebase) across Solidity contracts, a dedicated EVM chain with block explorer, and the Go/TypeScript backend.
- Designed the on-chain audit trail (bytes32 listing IDs, trade metadata) and admin platform: trade monitoring with exports, fee statistics, side-aware market-maker fees, and KYC flows.
- Shipped i18n covering all 22 Indian scheduled languages and hardened the stack with fixes from parallel security audits.
- Deployed custom L1s on Avalanche Subnets with tailored precompiles (gas, rewards, fees) – cut block time 40% over default config.
- Built Subgraph + fallback Node.js indexer for the Oboswap DEX (query latency ~2s → under 200ms) and gasless transactions (EIP-712/EIP-2771) that removed 60%+ onboarding drop-off.

Attenomics Labs

Solidity Engineer

Remote

Feb 2025 – Present

- Wrote end-to-end test suites across the full contract surface: reentrancy, access control, overflows, storage collisions.
- Built internal tooling to flag front-running, MEV sandwich vectors, and price manipulation in pending tx flows.
- Audited proxy/UUPS upgrade patterns for storage layout conflicts and initialization bugs.

Projects & Hackathon Wins

Sigill – sigill.store

Fhenix CoFHE Builder Waves – 850 USDT won

- Private FHE checkout on Base Sepolia: encrypted product IDs and amounts, confidential cUSDC escrow, bonded observers fulfilling gift-card orders, AES-wrapped codes only the buyer can unseal.

SilentBid – Github

Aleo Privacy Buildathon Winner – 178 USDT

- Sealed-bid ZK auctions live on Aleo testnet: commit-reveal with BHP256 commitments and uniform max-bid escrow so bids leak zero information; Chainlink CRE variant for Uniswap CCA token launches.

x402 Sessions – npm

x402 Buildathon – 200 USDC won

- Sign-once settle-many x402 micropayments: TypeScript SDK on npm, hosted facilitator, and a confidential Solana variant with encrypted amounts on Inco Lightning.

Custom-reth-chain – Github

Rust, Solidity, Docker

- Full PoA blockchain on Reth, EVM-compatible through Prague: consensus validation, signer-key block production, on-chain governance for chain config and treasury; 194 passing tests.

Other wins: FomoWallet (EthIndia 2024, 350 USDC + Graph Top 10 + Excellence in Privacy), AutoFund AI & MarketMind (SoSoValue Buildathon, 100+ USDT each), StealthPass (UNFOLD 2024 Avalanche track winner).
